Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	Yes
5	Environment configuration file (.env.example or similar)	NA
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	Yes
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	NA

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

5. Project Development Phase/
 app.py - Flask server
 model_pipeline.py - trains model, makes plots
 models/model.pkl - trained Logistic Regression
 Crop_recommendation.csv - dataset
 templates/ home.html, predict.html
 static/ style.css, hero.png
 plots/ EDA figures
 requirements.txt, vercel.json

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	https://opticrop-gules.vercel.app
Login Credentials (Demo)	Not required (public app)
Platform / Hosting Provider	Vercel
Repository Link	https://github.com/DeepakJaggupalli/Opticrop
Demo Video Link	

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

```

1. git clone https://github.com/DeepakJaggupalli/Opticrop.git
2. cd '5. Project Development Phase'
3. pip install requirements.txt
4. python app.py
5. Open http://127.0.0.1:5000/

Pre-requisites:
[ List required software, versions, and system requirements ]

Step 1: [e.g., Clone the repository: git clone <url>]
Step 2: [e.g., Install dependencies: pip install -r requirements.txt] Step
3: [e.g., Configure environment: copy .env.example to .env] Step 4:
[e.g., Run database migrations: python manage.py migrate] Step 5:
[e.g., Start the application: python manage.py runserver] Step 6:
[e.g., Open browser at http://localhost:8000]
  
```

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	No live weather integration yet	Planned - user enters values manually
2	Model limited to 22 crops in dataset	Retrain with a larger dataset
3
